Makerspaces for Creative Engagement, Outreach and Pathways

Presenters:
Ms Leah Irving, Lecturer, Curtin IT Services Strategic Projects

Abstract:
Makerspaces are environments that provide the tools for people to come together to share resources and knowledge, work on projects, network and build. This presentation explores some of the ways in which makerspaces provide creative and engaging contexts for 1) collaborative interdisciplinary problem solving, 2) pathways from high school to higher education and 3) building relationships between universities and the k-12 sector. Curtin University has a makerspace located in the Robertson Library that is open to staff and students. Now is your opportunity to find out how you might utilise this space for innovative and engaging learning experiences.
