The following changes have been made to the AQP Faculty Level Report

1. Date/time stamp added
2. New landing page showing trends

Currency of Data

All AQP reports now have a date/time stamp at the top left to indicate which survey responses are included in the data set.

Unit surveys submitted after this date/time will be shown as Did Not Respond (and thus not compliant for all standards) until the next data processing and transfer cycle. We anticipate that the lag between survey submission and updating of unit info in reports will generally be 1-2 working days.

Standard Compliance and Response Rate Trends

When you first open the report it will look a little bit different.

There will now be two sets of data, from the 2015 H2 and 2016 H1 AQP reporting periods, available in the report.

Remember that if you only want to view the 2016 H1 data you will need to select the period from the pull down menu on each page you are viewing. Alternatively, if you want to review a previous AQP period select it from this menu. It is a good idea to get into the habit of always checking the filter settings on each page, particularly the Period filter and the Faculty filter (or the School filter in the School Level report).
It is now possible to visualise the change in compliance over time for each of the eight AQ Standards. This is shown as a line graph. Hover over a data point to show the details.

In the Faculty Level report you can drill down to show the trend for compliance for each school. Select a standard and click on the symbol (not the line) and then select Drill and choose School.

A second line graph is provided to show the trend in response rate (for the mandatory Section 1 of the survey). You can drill down to view the trend for schools.
These trend graphs are now shown on the first ‘page’ of the report, the new landing page. Remember that to navigate to the additional pages in the report just use the report menu icon at top left.
