

## **Student-centred activities at the roll of a dice: The random session plan generator**

Amanda Smith  
Curtin University

Staff in UniPASS, Curtin University's peer-learning program, have focussed much time and energy building up a bank of resources for their Peer Learning Facilitators to use in their student-centred sessions. A substantial number of group activities have been designed and written up into session plans – all created through the vision and voices of our students (who are also our staff). The current focus on flipped classroom and student-centred learning has left some teaching staff crying out for creative, engaging activities to use with their students, and that's where we come in: After this hands on workshop you will walk away with a number of engaging, student-centred activities, and some ideas on how to use them with your own content/topic areas, all planned out and ready to go, to assist tutorial and workshop based learning in the earlier years of a degree\*. Participants should bring along their own favourite activity idea and/or most challenging topic in which to run a group-based activity for sharing. Together, we will build on the resources of the UniPASS team and use peer-learning principles to create a solid base of activities to choose from. Bring your mobile device to take photographs of the materials we create, and write them up later.

*(\* most of these activities are tried and tested in enabling courses, and years 1 and 2 of university degrees, however, they are of course transferable to higher years and to secondary and primary school level.)*
